[REDACTED] has asked for a stock number on some specially printed graph paper used for control. FOG has the same problem and I fought supplying them for over a year on the grounds that we weren't in the stationery business. However, they were unable to get a satisfactory material and I imagine you would have the same trouble.

It is in PO-660 as K-1-652. However, if you decide to put it in the FAK I know you will want a spare part number so I have assigned XD-157.

The minimum order the Printing Department will accept is 5000 sheets but if you prefer I can ship out of my stocks and replenish them. If the detachments are really going to use it properly, the consumption will probably average about ten sheets per working day per detachment.

I am taking no action without word from you.

Yours very truly

*Joe:*  
*Prefer we draw a max of 2000 sheets from Eds' stock rather than submit an order for 5000 sheets. Actually I don't believe they will use more than 1200 sheets total at both detachments.*
